July 18 Seminar to Focus on Hood Canal Dissolved Oxygen

Washington Sea Grant is offering a free Sound Science Seminar that will provide the latest information on the problem of dissolved oxygen in Hood Canal.

Hood Canal has historically low dissolved oxygen concentrations, which can pose a threat to marine life. The University of Washington has been studying this situation through its interdisciplinary Hood Canal Dissolved Oxygen Program. Dr. Allan Devol, from the UW School of Oceanography, will present the latest results of this research in “The Hood Canal Dissolved Oxygen Program: Recently Revealed Findings.”

The seminar is scheduled for July 18, 6:30 p.m., at the Alderbrook Resort and Spa, 10 East Alderbrook Drive, Union.

Admission is free, but seating is limited. Advance registration is required by contacting Teri King, Washington Sea Grant, at 360-432-3054 or guatemala@u.washington.edu.

The presentation is part of a series of Sound Science seminars featuring University of Washington research on the resources and economy of the Puget Sound region.

Washington Sea Grant, part of the University of Washington, funds marine research and works with communities and businesses to manage and protect marine resources.
